Cybersecurity Products and Services You Can Trust

Ever-changing security threats, meet always-on vulnerability management.

From hardware appliances and scanning tools to IT security consulting, continuous compliance, and industry-specific solutions, Carson & SAINT offers a full spectrum of cybersecurity safeguards and services. Our services combine compliance standards expertise with cutting-edge technology to identify risks, prioritize remediation, and ensure you are both secure and compliant. We are experts in both industry and government security standards. We offer industry-specific solutions for MSPs, MSSPs, and both private and public sector organizations.

You can't win every battle in the cyberwar. We help our customers analyze risk to find what matters and control what counts. We fight with a full stack of essential technology, operations, and standards that enable you to have a fighting chance to be ahead of your risk.

Make our deep experience your strength.

We have provided industry-leading cybersecurity and vulnerability management solutions to customers in both public and private sectors – in locations around the world – for more than 20 years. Whether your goal is to enhance your existing security program or to confirm to stringent compliance standards and reporting mandates, we can help you achieve it. Carson & SAINT is your trusted partner to help you go beyond compliance to achieve better visibility into your security posture and be more secure.

Reduce risk. Improve security.

With more than two decades of experience and innovation in IT security services, Carson & SAINT understands the critical issues that affect your organization's daily operations. We help to identify strengths and weaknesses in your culture and business – with minimum impact to your business. By building long-term relationships with each customer, we partner in the continuous effort to build better, more secure IT systems and a culture of security.

Vulnerability Assessment

Our team can assess your security policies and practices and help you define an information security strategy. We use proven methods to identify vulnerabilities. If you store government data, we can provide best practices and operational guidance through NIST that will ensure sure your systems are both secure and compliant.

Continuous Compliance

Experts in both industry and government security standards, we offer specific solutions for MSPs, MSSPs, and both private and public sector organizations. With decades of hands-on information security experience, our team includes PCI qualified service assessors (QSA) with degrees and certifications, including CISA, CISSP, GPEN, and GSNA.

Incident Response

When a breach or data loss occurs, an effective response means the established processes are executed by the right people, using the right tools, at the right time. We work collaboratively within your existing IR program to reduce the time between identification and response, helping to protect your IT investments.

Penetration Testing

We test and verify risk exposures, identifying hidden vulnerabilities. Based on our findings, we help you prioritize security risks so you can make informed decisions. Our powerful SAINTexploit tools allow us to develop custom exploits and post-exploitation strategies for effective remediation on your highest-risk vulnerabilities.

Social Engineering

Users become unwitting participants in network security breaches when they are unaware of risks. Using both physical and electronic social engineering strategies, we develop programs to test users, assess risk awareness, and determine security training needs. We identify the weaknesses in electronic and human controls intended to secure your facilities and help you develop stronger IT security programs.

Cloud Security

Operating in the cloud poses a new level of risk. We can help you migrate your IT systems to the cloud. Once you're there, we help ensure you have proper security controls in place to *stay* secure. And we provide on-going cloud scanning and penetration testing services leveraging our SAINTcloud® vulnerability management tools. These tools provide all the power and capability of a fully integrated vulnerability management solution without the need to implement and maintain on-premise infrastructure and software. Spend more time reducing risk and less time managing the tools you use.

Contracts

As a Washington, DC-based security consulting and management consulting firm, Carson & SAINT serves public institutions and private enterprises around the world. With more than 20 years of experience, we offer a wide variety of contract vehicles.

- CATS+ State of Maryland
- CIO-SP3 – any Federal, civilian, or DoD agency
- Department of State – Department of State
- DISA Joint Systems Engineering and Integration Office – Defense Information Systems Agency
- GSA IT Services Schedule – General Services Administration
- MEEC IT Professional Consulting Services

Manage vulnerabilities. Mitigate risk.

Securing and protecting critical information technology (IT) and operational technology (OT) resources become more challenging every year. Individuals, small groups, and state-sponsored organizations actively and constantly test our defenses and exploit system weaknesses.

Don't leave your most valued assets vulnerable to these threats. SAINT® products have been recognized as leading vulnerability management tools for more than 20 years. We offer a fully integrated suite of capabilities that deliver easy-to-use, powerful, effective solutions that can increase return on investment within your overall risk-management program.

SAINT® Security Suite

Whether your goal is to enhance your existing security program or to confirm to stringent compliance standards and reporting mandates, SAINT Security Suite can help you achieve it. Our award-winning vulnerability management and scanning solution can be deployed across a wide variety of operating systems, software applications, databases, network devices, and configurations.

Tr-3 Vulnerability Scanning

TR-3 cloud-based vulnerability scanning is our latest innovation. This easy-to-use, cost-effective, cloud-based scanning service helps you find vulnerabilities. For each exposure, Tr-3 reports provide specific, actionable information that allows you to mitigate risk. We specifically designed it with small business and small MSP needs in mind.
BB-9 Appliance

Designed specifically for vulnerability scanning of internal environments, this appliance is an affordable and reliable solution. It drives increased profitability MSPs and MSSPs and decreases time-to-value for their customers.

SAINTcloud® Vulnerability Management

This vulnerability management system offers the same powerful suite of capabilities of SAINT Security Suite but as a cloud-hosted solution. This reduces the total cost of ownership associated with deploying and maintaining an on-premise solution.

SAINTbox® Appliance

Developed for large environments requiring maximum performance, the SAINTbox appliance offers the power of SAINT Security Suite in an easy-to-deploy system. It's designed for an on-premise deployment with a pre-configured appliance. It is available in both set-top-box (STB) and 1U rack-mountable options to meet your specific needs.

SAINT for AWS

As one of the inaugural members of the Authority to Operate (ATO) on Amazon Web Services, We offer unique value to interoperate across partner platforms to decrease the time and costs to create and maintain compliance, whether your environment is cloud-based, on-premise or a hybrid.
