SAINT - Version 9.9

Enhanced for both the **Technologist** and the **Assessor**

CARSON & SAINT

Newest and Most Advanced SAINT Ever - Version 9.9

New features, new functionality, new benchmarks and new ways to make your operations secure. As is the foundation of our business, we listened to our customers and built a SAINT release forged in the fire of 2020! When times get tough, SAINT gets tougher. Below is a list of everything we have added to SAINT this year:

Reporting Improvements

- Option to preserve HTML tags in tutorial content of XML reports for better formatting
- More concise resolution information in tutorials
- Option to report the date a vulnerability was first discovered in trend analysis reports
- Open SAINT reports natively in Microsoft Word or WordPad for easy modification

Compatibility/Compliance

- Compatibility with FIPS 140-2 compliant operating systems
- TLSv1.3 support in all SAINT manager services
- Ability to configure TLS/SSL version used by agent server

CIS Security Software Certification for the following CIS benchmarks:

- Red Hat Enterprise Linux 7 and 8
- CentOS 8
- Ubuntu 18.04
- Windows Server 2016 and 2019
- Windows 10
- Amazon Linux 2
- Mac OS 10.14 and 10.15

SAINT - Version 9.9

Enhanced for both the **Technologist** and the **Assessor**

SAINT ASV Partner Portal

- Easily create and manage your end user accounts from one portal Single sign-on to your end user accounts

New AWS Marketplace product: SAINT (with license) on Red Hat

- Same as original SAINT (with license) product, but on commercially supported Red Hat operating system
- Actual usage included on AWS marketplace bill – no prepayment required

mySAINT Assistant

- Launches automatically when logging into the mySAINT portal from a new account
- Interactive experience guiding you through the process of setting up SAINT, customized for your use case

Easier License Setup

- Download your license key directly into SAINT Security Suite without cutting and pasting

VPN Tunnel Connector Enhancements

- New installer program for easier setup on Windows
- Connector bundled with adapter in a single download
- Runs persistently in the background as a Windows service

New API Calls

- Ability to resume stopped scans using the API
- Tutorial information in API result output
- Compression option when retrieving reports

Bundled Windows SAINT Node installer

- Seamlessly installs VirtualBox and a SAINT virtual machine from a single installer
- Pre-configured as a SAINT node which connects to the specified SAINT manager
- Start and stop the node from an easy-to-use desktop application

New Operational Features

- Configurable data retention period – automatically purge scans after specified number of days
- Show number of target-scans per scan or job
- Allow concurrent load-balanced scans per node
- Match asset tags in ticket rules applied to existing tickets
- Ability to retire scan nodes
- Show PCI pass/fail status on scans grid
- Option to use ephemeral keys to encrypt per-scan credentials
- Bulk assignment of asset tags
- Automatic assignment of agent permissions based on agent group

SAINT 9.9

Built with the strength of the customers experiences and needs
