

Cybersecurity Solutions Overview

See Your Risk Clearly. Act on What Matters.

**Critical vulnerabilities are always changing.
Your priorities should keep pace.**

Overview

Your attack surface does not stand still. New vulnerabilities emerge, environments change, and yesterday's priorities can quickly become today's exposures. You need more than another stream of security findings. You need a clear view of where risk exists, which vulnerabilities matter most, and where action can make the greatest difference.

That clarity comes from connecting cybersecurity expertise with continuous vulnerability and risk intelligence. Carson & SAINT helps you identify exposures across your environment, understand their potential impact, and prioritize remediation around your most critical risks. The result is a security program focused not simply on finding more vulnerabilities, but on reducing meaningful risk.

You cannot fix everything at once, and you should not have to. When your teams can distinguish critical vulnerabilities from background noise, they can direct time and resources toward what matters most. Better visibility leads to better priorities, faster decisions, and a more resilient security posture.

Turn security data into confident action.

Your security tools can generate thousands of findings. The challenge is knowing what deserves attention first.

With the right combination of visibility, expertise, and risk context, you can move beyond reacting to alerts and start making informed decisions about your security posture. That means reducing exposure, strengthening resilience, and demonstrating progress over time.

Cybersecurity Solutions Overview

Reduce Risk. Increase Visibility.

Build a Security Program Around What Matters Most.

A stronger security program starts with understanding what you have, where you are exposed, and what poses the greatest risk to your organization. Carson & SAINT helps you bring those pieces together so your teams can make smarter security decisions with less uncertainty. Instead of treating every vulnerability equally, you gain the context needed to prioritize action, strengthen defenses, and continuously reduce risk.

CyberRisk Management as a Service

Effective risk management should be part of how your organization operates, not an exercise you revisit only when an audit approaches. Identify critical assets, continuously evaluate vulnerabilities and exposures, understand relevant threats, and establish repeatable processes for prioritizing remediation. The result is a risk management program that helps your teams focus resources where they can have the greatest impact.

Security Assessment

Knowing where you stand is the first step toward knowing where to go next. A security assessment gives you a clearer view of vulnerabilities, gaps, and opportunities to improve your security posture. From there, you can build a practical roadmap aligned with recognized frameworks such as NIST and focus improvements where they will reduce risk most effectively.

Compliance as a Service

Compliance should give you greater confidence in your security program, not create another administrative burden. Navigate complex industry and government requirements with experienced guidance, including support from PCI Qualified Security Assessors (QSAs) and professionals holding credentials such as CISA, CISSP, GPEN, and GSNA. Meet your obligations while building security practices that extend beyond the audit.

SAINT® Risk Navigator

You do not need another list of vulnerabilities. You need to know which ones put your organization at risk. SAINT Risk Navigator brings greater visibility to vulnerabilities and exposures across your environment, helping you identify critical issues, prioritize remediation, and track risk more effectively. With clearer priorities, your teams can spend less time sorting through findings and more time reducing risk.

Security Frameworks & Compliance Standards

- ✓ **PCI DSS** – Payment Card Industry Data Security Standard
- ✓ **HIPAA** – Health Insurance Portability and Accountability Act
- ✓ **CMMC** – Cybersecurity Maturity Model Certification
- ✓ **FISMA** – Federal Information Security Modernization Act
- ✓ **FERPA** – Family Educational Rights and Privacy Act
- ✓ **CSF** – NIST Cybersecurity Framework
- ✓ **RMF** – Risk Management Framework
- ✓ **ISO/IEC 27000** – Information Security Management Standards
- ✓ **CE/CE+** – Cyber Essentials/Cyber Essentials Plus
